PREFACE

The **POPULATION AND VITAL STATISTICS REPORT** is prepared and published by the Statistical Office, Central Planning Division, Ministry of Finance and Economic Planning.

This report presents statistics on live births, deaths, marriages and divorces for the period 2012 – 2014. For comparative purposes, historical data for up to ten (10) years is presented.

Population data are obtained from the decennial Population and Housing Census conducted by the Statistical Office. Statistics on vital events are obtained from administrative records of the Registry Department where all vital events are recorded. The Chief Statistician and staff of the Statistical Office express gratitude for the assistance and support provided by the staff of the Registry Department and the Ministry of Health, Wellness and the Environment. The latter has responsibility for coding the mortality data obtained from the Registry Department.

Notification of errors, omissions and suggestions for improvement in the format and content of future publications will be appreciated.

METHODOLOGY

There are nineteen (19) Administrative Districts in St. Vincent and the Grenadines where the registration of births and deaths take place. However, for statistical reporting purposes, the Statistical Office has regrouped the births and deaths to reflect the usual residence of mothers within the respective census divisions rather than Administrative Districts. This facilitates easy comparison of vital events with other socio economic statistics provided by the Statistical Office.

In the case of live births, data is grouped according to age of mother, sex of baby, order of birth/parity, month when birth took place, status (legitimate or illegitimate)and usual place of resident of mother at the time of birth. Data on deaths are also grouped by sex, month and usual place of residence. The cause of death is grouped by disease category in conformity with the new Pan American Health Organisation's (PAHO) list 6/67 for tabulation of ICD-10 mortality.

The activities of data collation and tabulation are done by the end of the first quarter in the current year. The lag in providing vital statistics is about three (3) months. Late registration especially for births occurring in the month of December, affects the timely dissemination of vital statistics.

CONCEPT AND DEFINITION

LIVE BIRTH

The complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of the pregnancy, which after such separation, breathes or shows other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached. Each product to such a birth is considered to be live born.

STILL BIRTH

A stillbirth is a baby born with no signs of life at or after 28 weeks gestation.

CRUDE BIRTH RATE

The Crude Birth Rate indicates the number of live births per 1,000 population in a given year.

FETAL DEATH

A fetal death is formally defined as death prior to the complete expulsion or extraction from its mother of a product of conception irrespective of the duration of pregnancy.

DEATH

Death is the permanent disappearance of all evidence of life at any time after birth has taken place. A death can only occur after a live birth has taken place.

CRUDE DEATH RATE

The Crude Death Rate is the number of deaths per 1,000 population in a given year.

INFANT MORTALITY RATE

The Infant Mortality Rate is the number of deaths to infants under 1 year of age per 1,000 live births in a given year.

NEONATAL MORTALITY

A neonatal death is defined as a death during the first 28 days of life (age 0 – 28 days). Neonatal mortality is broken down into early and late neonatal mortality. Early neonatal mortality refers to death of an infant during the first 6 days of life (age 0 – 6 days). Late neonatal mortality refers to death of an infant age 7 – 28 days.

POST NEONATAL MORTALITY

Post neonatal mortality refers to infant deaths after 28 days but before attaining 1 year of age.

RATE OF NATURAL INCREASE

The rate of Natural Increase is the rate at which the population is increasing (or decreasing) in a given year due to surplus (or deficit) of births over deaths as a percentage of the base population.

LIFE EXPECTANCY AT BIRTH

Life expectancy at birth is defined as the average number of years that a new-born could expect to live if he or she were to pass through life subject to the age specific mortality rates of a given period.

TOTAL FERTILITY RATE

The total fertility rate (TFR) is the average number of children that would be born to a woman by the time she ended childbearing if she were to pass through all her childbearing years conforming to the age-specific fertility rates of a given year.

GROSS REPRODUCTIVE RATE

The gross reproductive rate (GRR) is the average number of daughters that would be born to a woman (or group of women) during her lifetime if she passed through her childbearing years conforming to the age-specific fertility rates of a given year.

CRUDE MARRIAGE RATE

The marriage rate (also called the crude marriage rate) is the number of marriages per 1,000 total population in a given year. This rate is calculated using the number of marriages, not the number of people getting married and includes both first marriage and remarriages.

DIVORCE RATE

The divorce rate (or crude divorce rate) indicates the number of divorces per 1,000 population in a given year. The rate is calculated using the number of divorces

SURVIVORSHIP

The proportion of the population surviving to a given age

ILLEGITIMACY

The social status of a child whose parents were not married to each other at the time of his or her birth

LIVE BIRTHS

LIVEBIRTHSHIGHLIGHTS

2012 – 2014

- ❖ An average of 1,806 live births was recorded over the three year period 2012-2014. The total number of births for the year 2012 was 1,840; in 2013 there were 1,738 live births, a 5.9 percent decrease from the previous period, and 1,841 live births in 2014.
- ❖ There was little variation in the Crude Birth Rate (CBR) between 2012 and 2014. The CBR was at its lowest in 2013, with 15.8 live births per 1000 persons.
- ❖ The sex ratio at birth fluctuated during the three year period under review. There were 101 males per 100 females in 2012, 103 males to 100 females in 2013 and 98 males to 100 females in 2014.
- ❖ During the period 2012 to 2014, births to teenage girls as a percentage of total births declined marginally from 17.8 percent in 2012 to 17.5 percent in 2014.
- ❖ In each year, more than half of the total registered births were to women in the age group 20-29. Over the three (3) year period, the proportion of births to women in this age group decreased slightly from 51.3 percent in 2012 to 50.0 percent in 2014. A corresponding increase is noted for women in age group 30-39, where proportion of births to women in this age cohort increased by 2.5 percentage points, from 27.2 percent in 2012 to 29.7 percent in 2014.
- ❖ Over 60 percent of total registered births during this period were to women with no occupation. This group includes those who reported they were unemployed at the time the birth took place, as well as women considered to be out of the labour force (women in home duties, full time students etc.).

- ❖ Births to unmarried women (Illegitimate births) accounted for the largest percentage of total births. In 2012, 2013 and 2014, illegitimate births accounted for 84.7 percent, 82.9 percent and 84.4 percent of total births respectively.

Table 2.1: Live Births Summary Table, 2005 - 2014

MORTALITY

MORTALITY HIGHLIGHTS

2011- 2014

- ❖ An average of 930 registered deaths was recorded over the three year period 2012 – 2014.
- ❖ The Crude Death Rate (CDR) was 7.8, 8.4 and 9.1 per 1000 population in 2012, 2013 and 2014 respectively.
- ❖ The Infant Mortality Rate (IMR) fluctuated during the period under review. The Infant Mortality Rate moved from 13.6 per 1000 live births in 2012, to 18.0 in 2013 then declined sharply to 15.8 in 2014.
- ❖ The Neonatal category (0 to 28 days of age) recorded the majority of infant deaths.
- ❖ In 2014, the total number of still births amounted to 25, the largest number for the period under review.
- ❖ The age group 85 and over recorded the highest number of deaths; showing number of deaths as 168, 174 and 212 in the years 2012, 2013 and 2014 respectively.
- ❖ In 2014, Life Expectancy at Birth was 74.6 for the female population and 68.4 for male population. In 2014, the expectation of further life for individuals who reached age 95 was approximately 3 years.
- ❖ There is a general trend for survivorship to the next age cohort to be higher for females than their male counterparts.

Table 3.1: Mortality Summary Table, 2005– 2014

Year	Infant Death (< 1 Year)		Other Deaths (1 Year+)		Total Deaths (Residents)	Infant Mortality Rate (IMR)	Crude Death Rate (CDR)
	Male	Female	Male	Female			
2005	17	12	404	380	813	16.3	7.5
2006	26	24	410	317	777	27.8	7.2
2007	24	10	399	346	779	18.7	7.2
2008	14	20	442	372	848	17.9	7.8
2009	20	14	384	359	777	17.8	7.1
2010	19	18	432	358	827	20.7	7.6
2011	26	12	443	401	882	22.0	8.1
2012	14	11	460	373	858	13.6	7.9
2013	21	12	514	414	926	18.4	8.5
2014	18	11	566	440	1,006	15.8	9.2

Note: Only death of residents (persons who lived in St Vincent and the Grenadines for more than 6 months) are considered in generating mortality rates

MARRIAGES

MARRIAGE HIGHLIGHTS
2012- 2014

- ❖ During the review period 2012 - 2014, there was an average of 517 marriages.
- ❖ The Crude Marriage Rate (CMR) remained virtually unchanged over the three year period. The CMR was 4.7 per 1000 persons in 2011, 4.6 in 2012 and 4.8 in 2013.
- ❖ The month of December remain the most popular month for weddings.
- ❖ The data reveals that females tend to marry at an earlier age than their male counterparts.
