PREFACE

The *POPULATION AND VITAL STATISTICS REPORT* is prepared and published by the Statistical Office, Central Planning Division, Ministry of Finance, Economic Planning, Sustainable Development and Information Technology.

This report presents statistics on live births, deaths, marriages and divorces for the period 2017 - 2019. For comparative purposes, historical data for up to ten (10) years is presented.

Population data are obtained from the decennial Population and Housing Census conducted by the Statistical Office. Statistics on vital events are obtained from administrative records of the Registry Department where all vital events are recorded. The Chief Statistician and staff of the Statistical Office express gratitude for the assistance and support provided by the staff of the Registry Department and the Ministry of Health, Wellness and the Environment. The latter has responsibility for coding the mortality data obtained from the Registry Department.

Notification of errors, omissions and suggestions for improvement in the format and content of future publications will be appreciated.

Development and Information Technology
Kingstown
St. Vincent and the Grenadines

METHODOLOGY

There are nineteen (19) Administrative Districts in St. Vincent and the Grenadines where the registration of births and deaths take place. However, for statistical reporting purposes, the Statistical Office has regrouped the births and deaths to reflect the usual residence of mothers within the respective census divisions rather than Administrative Districts. This facilitates easy comparison of vital events with other socio economic statistics provided by the Statistical Office.

In the case of live births, data is grouped according to age of mother, sex of baby, order of birth/parity, month when birth took place, status (legitimate or illegitimate) and usual place of resident of mother at the time of birth. Data on deaths are also grouped by sex, month and usual place of residence. The cause of death is grouped by disease category in conformity with the new Pan American Health Organisation's (PAHO) list 6/67 for tabulation of ICD-10 mortality.

The activities of data collation and tabulation are done by the end of the first quarter in the current year. The lag in providing vital statistics is about three (3) months. Late registration especially for births occurring in the month of December, affects the timely dissemination of vital statistics.

DEFINITIONS

LIVE BIRTH

The complete expulsion from its mother of a product of conception, irrespective of the duration of the pregnancy, which after such separation, breathes or shows other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached. Each product to such a birth is considered to be live born.

STILL BIRTH

A stillbirth is a baby born with no signs of life at or after 28 weeks of gestation.

CRUDE BIRTH RATE

The Crude Birth Rate indicates the number of live births per 1,000 populations in a given year.

CENSUS DIVISIONS (CD)

For census purposes, St. Vincent and the Grenadines is divided into 13 divisions. These are referred to as census divisions and are the largest subdivisions for which census data are collected and disseminated.

TOTAL FERTILITY RATE

The total fertility rate (TFR) is the average number of children that would be born to a woman by the time she ended childbearing if she were to pass through all her childbearing years conforming to the age-specific fertility rates of a given year.

GROSS REPRODUCTIVE RATE

The gross reproductive rate (GRR) is the average number of daughters that would be born to a woman (or group of women) during her lifetime if she passed through her childbearing years conforming to the age-specific fertility rates of a given year.

RATE OF NATURAL INCREASE

The rate of Natural Increase is the rate at which the population is increasing (or decreasing) in a given year due to surplus (or deficit) of births over deaths as a percentage of the base population.

DEATH

Death is the permanent disappearance of all evidence of life at any time after birth has taken place. A death can only occur after a live birth has taken place.

CRUDE DEATH RATE

The Crude Death Rate is the number of deaths per 1,000 Population in a given year.

FEOTAL DEATH

A foetal death is formally defined as death prior to the complete expulsion or extraction from its mother of a product of conception irrespective of the duration of pregnancy.

INFANT MORTALITY RATE

The Infant Mortality Rate is the number of deaths to infants under 1 year of age per 1,000 live births in a given year.

NEONATAL MORTALITY

A neonatal death is defined as a death during the first 28 days of life (age 0 - 28 days). Neonatal mortality is broken down into early (0 - 6 days) and late neonatal mortality (7 - 28 days).

POST NEONATAL MORTALITY

Post neonatal mortality refers to infant deaths after 28 days but before attaining 1 year of age.

LIFE EXPECTANCY AT BIRTH

Life expectancy at birth is defined as the average number of years that a new-born could expect to live if he or she were to pass through life subject to the age specific mortality rates of a given period.

MARRIAGE

The act, ceremony or process by which the legal relationship of spouses is constituted. The legality of the union may be established by civil, religious or other means as recognized by the laws of each country.

NATURAL CHANGE

Natural change is one of the main component of population change. It is the difference between the number of births and the number of deaths for a specific period.

CRUDE MARRIAGE RATE

The crude marriage rate is the number of marriages per 1,000 total populations in a given year. This rate is calculated using the number of marriages, not the number of people getting married and includes both first marriage and remarriages.

LEGITIMATION

The formal investing of a person with the status and rights of a person born in wedlock, according to the laws of each country.

DIVORCE

The final legal dissolution of a marriage, that is that separating of spouse which confers on the parties the right to remarriage under civil, religious and /or other provisions, according to the laws of each country.

DIVORCE RATE

The divorce rate (or crude divorce rate) indicates the number of divorces per 1,000 populations in a given year. The rate is calculated using the number of divorces

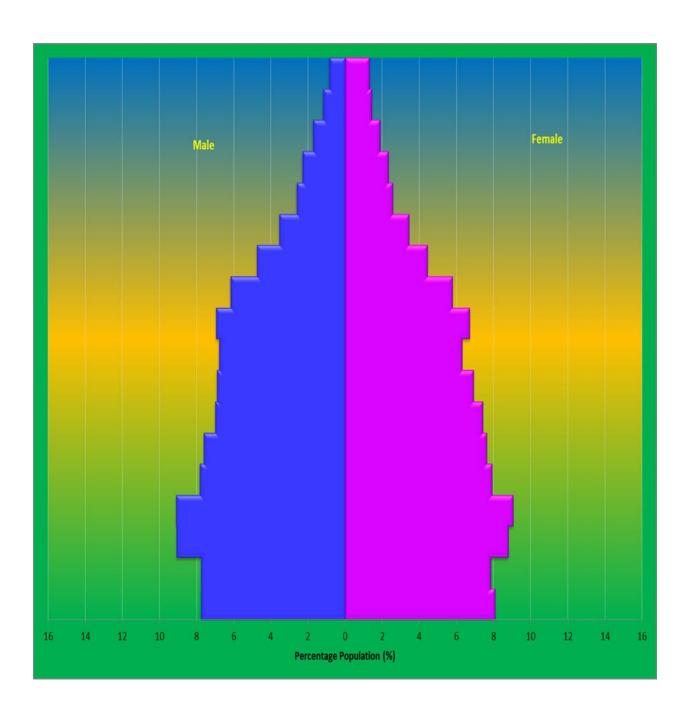

SENIOR POPULATION

The elderly population is defined as people age 60 years and over.

SURVIVORSHIP

The proportion of the population surviving to a given age.

POPULATION

POPULATION HIGHLIGHTS

- There is a gradual shift from a predominant female population (1980) to a predominant male population (1995), this trend persists up to the current period.
- The population age 0 to 24 years declined over four census periods. This sub-population dropped from 65,108 in 1980 to 45,444 in 2012, an overall decline of 30.2 percent.
- The population age 60 years and older, increased over the census years. Additionally, as a proportion of total population, the senior population increased from 8.2 percent in 1980 to 12.6 percent in 2012.
- Census population counts show that the core working age population (age 25 to 59 years)
 has been increasing gradually. This cohort's population increased from 24,562 in 1980 to
 49,933 in 2012.
- The census divisions of "Kingstown", "Suburbs of Kingstown", "Calliaqua" and "Marriaqua", account for the majority (53.4%) of the country's household population.
- The Kingstown census division is the most densely populated area in St. Vincent and the Grenadines.
- The Chateaubelair is the least densely populated area in St. Vincent and the Grenadines.

LIVE BIRTHS

LIVE BIRTHS HIGHLIGHTS

2017 - 2019

- O An average of 1,496 live births was recorded over the three-year period, 2017-2019. The total number of live births for the year 2017 was 1,539. In 2018 there were 1,524 live births and 1,426 live births in 2019.
- The crude birth rate declined from 13.9 in 2017 to 12.9 in 2019.
- The sex ratio at birth fluctuated during the three-year period. There were 107 males per 100 females in 2017, 115 males per 100 females in 2018 and 113 males per 100 females in 2019.
- o Births to teenage girls as a percentage of total births fell from 16.4 in 2017 to 14.9 in 2019.
- Almost 40 percent of the total registered births were to young women age 15 to 24 years.
 During the period 2017 to 2019, the proportion of births to women in this age group declined from 41.3 percent in 2017 to 39.9 percent in 2019.
- In 2019, births to unmarried women (Illegitimate births) accounted for 84 percent of total births.
- Nearly 60 percent of total registered births were to women who were not employed at the time of registration in 2019.
- During the period the Total Fertility Rate (TFR) remained below replacement level. In 2017 the TFR was 1.9, in 2018 it declined to 1.8 and further declined in 2019 to 1.7.

Table 2.1: Live Births Summary Table, 2010 - 2019

Year	Male Births	Female Births	Total No. of Live Births	Sex Ratio at Birth	Crude Birth Rate (CBR)	Total Fertility Rate (TFR)	Gross Reproductive Rate (GRR)

MORTALITY

MORTALITY HIGHLIGHTS

2017 - 2019

- o An average of 966 registered deaths was recorded over the three-year period.
- The Crude Death Rate (CDR) increased from 8.2 per 1,000 population in 2017 to 9.2 per 1,000 population in 2019.
- The Infant Mortality Rate (IMR) fluctuated from 11.0 per 1,000 live births in 2017, 14.4 per 1,000 live births in 2018 to 11.2 per 1,000 live births in 2019.
- The number of infant deaths varied over the period under review. Infant deaths declined from 17 in 2017 to 15 in 2019.
- o The neonatal deaths, accounted for 60 percent of infant deaths in 2019.
- o In 2019, Life Expectancy at Birth was 75.0 years for the female population and 69.3 years for the male population.
- o In 2019, the expectation of further life for women who reached age 15 was approximately 60.8 years, 5.3 years more than men of the same age cohort.
- o In 2019, the expectation of further life for women who reached age 50 was approximately 28.5 years, 4.2 years more than their male counterparts.
- There is a general trend for survivorship to the next age cohort to be higher for females than their male counterparts.

MARRIAGES

MARRIAGE HIGHLIGHTS

2017 - 2019

- During the review period 2017-2019, there was an average of 514 marriages.
 Marriages also decreased, from 536 in 2017 to 482 in 2019.
- The Crude Marriage Rate (CMR) decreased over the three-year period. The CMR was 4.9 per 1000 persons in 2017, 4.7 in 2018 and 4.4 in 2019.
- o The month of December remains the most popular month for weddings.
- The data reveals that females tend to marry at an earlier age than their male counterparts.
