## **PREFACE**

The *POPULATION AND VITAL STATISTICS REPORT* is prepared and published by the Statistical Office, Economic Planning Division, Ministry of Finance, Economic Planning and Information Technology.

This report presents statistics on live births, deaths, marriages and divorces for the period 2019 - 2021. For comparative purposes, historical data for up to ten (10) years is presented.

Population data are obtained from the decennial Population and Housing Census conducted by the Statistical Office. Statistics on vital events are obtained from administrative records of the Registry Department where all vital events are recorded. The Chief Statistician and staff of the Statistical Office express gratitude for the assistance and support provided by the staff of the Registry Department and the Ministry of Health, Wellness and the Environment. The latter has responsibility for coding the mortality data obtained from the Registry Department.

Notification of errors, omissions and suggestions for improvement in the format and content of future publications will be appreciated.

#### Lavorne Williams (Mrs.)

Chief Statistician
Statistical Office
Economic Planning Division
Ministry of Finance, Economic Planning and Information Technology
Kingstown
St. Vincent and the Grenadines

# **METHODOLOGY**

There are nineteen (19) Administrative Districts in St. Vincent and the Grenadines where the registration of births and deaths take place. However, for statistical reporting purposes, the Statistical Office has regrouped the births and deaths to reflect the usual residence of mothers within the respective census divisions rather than Administrative Districts. This facilitates easy comparison of vital events with other socio economic statistics provided by the Statistical Office.

In the case of live births, data is grouped according to age of mother, sex of baby, order of birth/parity, month when birth took place, status (legitimate or illegitimate) and usual place of resident of mother at the time of birth. Data on deaths are also grouped by sex, month and usual place of residence. The cause of death is grouped by disease category in conformity with the new Pan American Health Organisation's (PAHO) list 6/67 for tabulation of ICD-10 mortality.

The activities of data collation and tabulation are done by the end of the first quarter in the current year. The lag in providing vital statistics is about three (3) months. Late registration especially for births occurring in the month of December, affects the timely dissemination of vital statistics.

## **DEFINITIONS**

#### **LIVE BIRTH**

The complete expulsion from its mother of a product of conception, irrespective of the duration of the pregnancy, which after such separation, breathes or shows other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached. Each product to such a birth is considered to be live born.

#### STILL BIRTH

A stillbirth is a baby born with no signs of life at or after 28 weeks of gestation.

#### **CRUDE BIRTH RATE**

The Crude Birth Rate indicates the number of live births per 1,000 populations in a given year.

#### **CENSUS DIVISIONS (CD)**

For census purposes, St. Vincent and the Grenadines is divided into 13 divisions. These are referred to as census divisions and are the largest subdivisions for which census data are collected and disseminated.

#### **TOTAL FERTILITY RATE**

The total fertility rate (TFR) is the average number of children that would be born to a woman by the time she ended childbearing if she were to pass through all her childbearing years conforming to the age-specific fertility rates of a given year.

#### **GROSS REPRODUCTIVE RATE**

The gross reproductive rate (GRR) is the average number of daughters that would be born to a woman (or group of women) during her lifetime if she passed through her childbearing years conforming to the age-specific fertility rates of a given year.

#### **RATE OF NATURAL INCREASE**

The rate of Natural Increase is the rate at which the population is increasing (or decreasing) in a given year due to surplus (or deficit) of births over deaths as a percentage of the base population.

#### **DEATH**

Death is the permanent disappearance of all evidence of life at any time after birth has taken place. A death can only occur after a live birth has taken place.

#### **CRUDE DEATH RATE**

The Crude Death Rate is the number of deaths per 1,000 Population in a given year.

#### FEOTAL DEATH

A foetal death is formally defined as death prior to the complete expulsion or extraction from its mother of a product of conception irrespective of the duration of pregnancy.

#### **INFANT MORTALITY RATE**

The Infant Mortality Rate is the number of deaths to infants under 1 year of age per 1,000 live births in a given year.

#### **NEONATAL MORTALITY**

A neonatal death is defined as a death during the first 28 days of life (age 0 - 28 days). Neonatal mortality is broken down into early (0 - 6 days) and late neonatal mortality (7 - 28 days).

#### **POST NEONATAL MORTALITY**

Post neonatal mortality refers to infant deaths after 28 days but before attaining 1 year of age.

#### **LIFE EXPECTANCY AT BIRTH**

Life expectancy at birth is defined as the average number of years that a new-born could expect to live if he or she were to pass through life subject to the age specific mortality rates of a given period.

#### **MARRIAGE**

The act, ceremony or process by which the legal relationship of spouses is constituted. The legality of the union may be established by civil, religious or other means as recognized by the laws of each country.

#### **NATURAL CHANGE**

Natural change is one of the main component of population change. It is the difference between the number of births and the number of deaths for a specific period.

#### **CRUDE MARRIAGE RATE**

The crude marriage rate is the number of marriages per 1,000 total populations in a given year. This rate is calculated using the number of marriages, not the number of people getting married and includes both first marriage and remarriages.

#### **LEGITIMATION**

The formal investing of a person with the status and rights of a person born in wedlock, according to the laws of each country.

#### **DIVORCE**

The final legal dissolution of a marriage, that is that separating of spouse which confers on the parties the right to remarriage under civil, religious and /or other provisions, according to the laws of each country.

#### **DIVORCE RATE**

The divorce rate (or crude divorce rate) indicates the number of divorces per 1,000 populations in a given year. The rate is calculated using the number of divorces

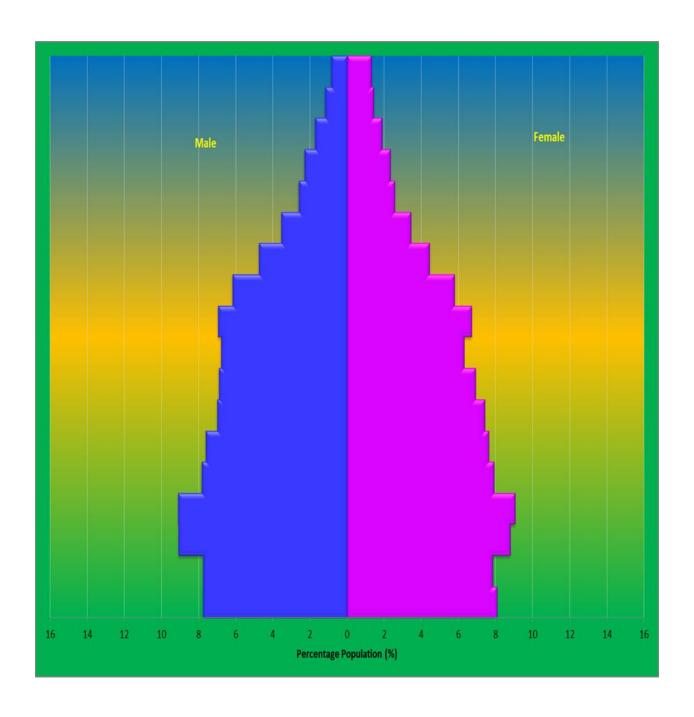

#### **SENIOR POPULATION**

The elderly population is defined as people age 60 years and over.

#### **SURVIVORSHIP**

The proportion of the population surviving to a given age.

# **POPULATION**

# **POPULATION HIGHLIGHTS**

- There is a gradual shift from a predominant female population (1980) to a predominant male population (1995), this trend persists up to the current period.
- The population age 0 to 24 years declined over four census periods. This sub-population dropped from 65,108 in 1980 to 45,444 in 2012, an overall decline of 30.2 percent.
- The population age 60 years and older, increased over the census years. Additionally, as a proportion of total population, the senior population increased from 8.2 percent in 1980 to 12.6 percent in 2012.
- Census population counts show that the core working age population (age 25 to 59 years)
  has been increasing gradually. This cohort's population increased from 24,562 in 1980 to
  49,933 in 2012.
- The census divisions of "Kingstown", "Suburbs of Kingstown", "Calliaqua" and "Marriaqua", account for the majority (53.4%) of the country's household population.
- The Kingstown census division is the most densely populated area in St. Vincent and the Grenadines.
- The Chateaubelair is the least densely populated census division in St. Vincent and the Grenadines.

# LIVE BIRTHS

## LIVE BIRTHS HIGHLIGHTS

#### 2019 - 2021

- An average of 1,372 live births was recorded over the three-year period, 2019- to -2021. The
  total number of live births for the year 2019 was 1,426, live births in 2020 was 1,320 and
  1,370 live births in 2021.
- The crude birth rate declined from 12.9 in 2019 to 12.4 in 2021.
- o The sex ratio at birth fluctuated over the three-year period. There were 113 males per 100 females in 2019, 94 males per 100 females in 2020 and 102 males to 100 females in 2021.
- Births to teenage girls as a percentage of total births fluctuated over the three-year period. It was 14.9 in 2019, 15.7 in 2020 and 10.4 in 2021.
- Births to women 15 24 years accounted for 37.7 percent the total registered births over the period 2019 to 2021. During the period the proportion of births to women in this age group declined from 39.9 percent in 2019 to 34.9 percent in 2021.
- In 2021, births to unmarried women (Illegitimate births) accounted for 84.7 percent of total births.
- o For the year 2021, 54 percent of total registered births were to women who were not employed at the time of registration.
- During the period the Total Fertility Rate (TFR) remained below replacement level. The TFR remained fairly constant at 1.7 in 2019, 1.6 in 2020, and 1.7 in 2021.

Table 2.1: Live Births Summary Table, 2012 - 2021

Year	Male Births	Female Births	Total No. of Live Births	Sex Ratio at Birth	Crude Birth Rate (CBR)	Total Fertility Rate (TFR)	Gross Reproductive Rate (GRR)
2012	925	915	1,840	101	16.7	2.2	1.1
2013	880	858	1,738	103	15.8	2.1	1.0
2014	912	929	1,841	98	16.7	2.2	1.1
2015	917	896	1,813	102	16.4	2.2	1.1

## MORTALITY

### **MORTALITY HIGHLIGHTS**

#### 2019 - 2021

- o There is an average of 1,085 registered deaths recorded over the three-year period.
- The Crude Death Rate (CDR) increased from 9.2 per 1,000 population in 2019 to 10.7 per 1,000 population in 2021.
- o The Infant Mortality Rate (IMR) increased from 10.5 per 1,000 live births in 2019 to 16.8 per 1,000 live births in 2021.
- o The number of infant deaths increased from 15 in 2019 to 23 in 2021.
- o The neonatal deaths, accounted for 87 percent of infant deaths in 2021.
- In 2021, life expectancy at birth was 72.5 years for the female population and 67.2 years for the male population.
- o In 2021, the expectation of further life for women who reached age 15 was approximately 58.6 years, 4.9 years more than men of the same age cohort.
- o In 2021, the expectation of further life for women who reached age 50 was approximately 26.8 years, 3.6 years more than their male counterparts.
- There is a general trend for survivorship to the next age cohort to be higher for females than their male counterparts.

Table 3.1: Mortality Summary Table<sup>1</sup>, 2012 - 2021

Year	Infant Death (Un of age		Other Deaths Old	•	Total Deaths Residents	Infant Mortality Rate (IMR)	Crude Death Rate (CDR)
	Male	Female	Male	Female

## MARRIAGES

### **MARRIAGE HIGHLIGHTS**

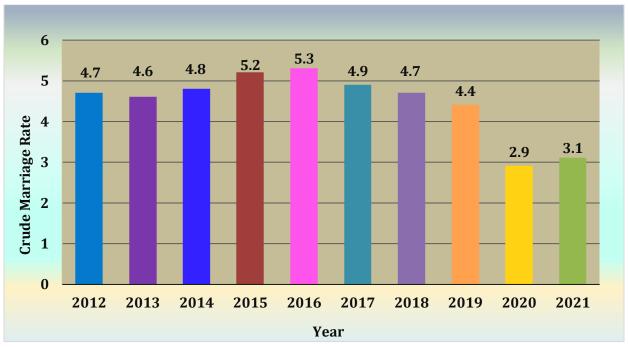

#### 2019 - 2021

- During the review period 2019-2021, there was an average of 382 marriages. Marriages also fluctuated during the three-year period from 482 in 2019 to 347 in 2021. It was 482 in 2019 to 316 in 2020 and 347 in 2021.
- The Crude Marriage Rate (CMR) fluctuated over the three-year period. The CMR was 4.4 per 1000 persons in 2019, 2.9 in 2020 and 3.1 in 2021.
- o The month of December remains the most popular month for weddings.
- The data reveals that females tend to marry at an earlier age than their male counterparts.
